

## Care instruction

Dear Customer,

you have purchased a high-quality product with a number of special characteristic. The material is silver-coated by using a special process, without applying nanosilver. Shades, colour differences and discolourations are not manufacturing faults and are part of the normal look of the product.

To ensure the product retains its functionality even after several washes, please observe the following care instructions:

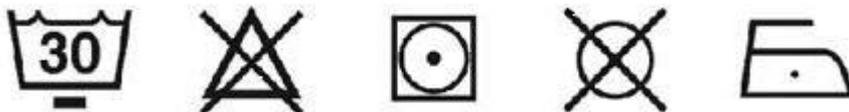

**Washing:** Gentle wash, using standard gentle washing powder or liquids that do not contain optical whitener. The product can be washed in a home washing machine at a temperature of 30°C/86°F more than 150 times. A higher washing temperature is not necessary due to the product's anti-bacterial characteristics. **Do not use disinfectant, cleaning products that contain chlorine, vinegar based cleaner, nor any fabric softeners!**

**Bleaching:** We strongly advise against any kind of bleaching. **Please do not use chlorine.** The silver coating will be damaged by the chlorine and will lose its functionality.

**Tumbler** Use a gentle setting, as the sensitive surface of the product can be destroyed by direct contact with heat.

**Dryer:** Preferably, air drying without direct and constant sunlight. If a drying treatment cannot be avoided, it must be set on the gentle cycle, since the sensitive surface can be damaged in direct contact with heat.

**Ironing:** Iron at a low temperature without the use of steam

### **Product information:**

The manufacturer does not accept any liability for damages/injuries as a result of improper handling or incorrect use. We recommend that customers carry out washing test according to the product's specifications. Please note that the surface resistance of the product may change on account of an individual's sweat composition and possibly also if she or he is taking particular medicines. We can accept no liability for this.
